# APD-RSA-5018-20'-5" DIA - .188"

# Round Straight Aluminum Pole

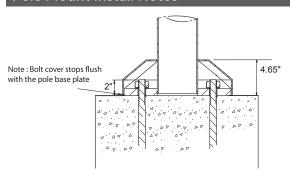

# Tenon Post Top

## **Pole Mount Install Notes**

A level concrete base is poured and finished flush. This provides a uniform load displacement pad for the forces created by wind and luminaire weight

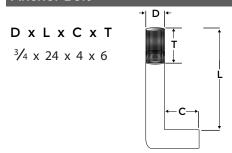

Failing to do this voids pole warranty

Foundation and Design by Others

# **Physical Data**

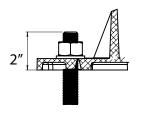

Pole Height: 20' Pole Diameter: 5" Thickness: 0.188" Weight: 73 lbs

# **Anchor Bolt**

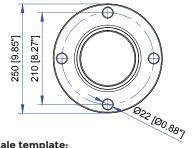

# **Bolt Projection**

**Die-Cast Base Cover** 

# **Mounting Base**

#### Not to scale template:

This drawing is being furnished for reference dimensions only and cannot be used as a template to set anchor bolts. Since it is 'not to scale' Ligman accepts no responsibility for its intended use. Refer to site plans and specification before installing any anchor bolts.

Contact Ligman Lighting USA for bolt template prior to pouring anchor bolts.

powder coating. Our metal decoration process can easily transform the appearance of metal or aluminum product into a wood grain finish.

This patented technology enables the simulation of wood grain, and even marble or granite finish through the use of decorative powder coating.

The wood grain finish is so realistic that it's almost undistinguishable from real wood, even from a close visual inspection. The system of coating permeates the entire thickness of the coat and as a result, the coating cannot be removed by normal rubbing, chipping, or scratching

The Coating Process
After pre-treatment the prepared parts are powder coated with a specially formulated polyurethane powder. This powder provides protection against wear, abrasion, impact and corrosion and acts as the relief base color for the finalized metal decoration.

The component is then wrapped with a sheet of non-porous film with the selected decoration pattern printed on it using special high temperature inks.

complete thermo print and then transferred into a customized oven. The oven transforms the ink into different forms within the paint layer before it becomes solid. Finally, the film is removed, and a vivid timber look on aluminum remains.

Wood grain coating can create beautiful wood-looking products of any sort. There are over 300 combinations of designs currently in use. Wood grains can be made with different colors, designs, etc.

Our powder coatings are certified for indoor and outdoor applications and are backed by a comprehensive warranty. These coatings rise to the highest conceivable standard of performance excellence and design innovation.

- Added Benefits
   Resistance to salt-acid room, accelerated aging
- Boiling water, lime and condensed water resistant
   Anti-Graffiti, Anti-Slip, Anti-Microbial, Anti-Scratch
   Super durable (UV resistant)
   TGIC free (non-toxic)

# **INSTALLATION AND SERVICE MANUAL**

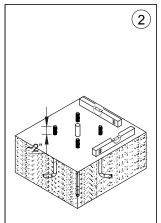

Concrete pad to be provided by contractor after leveling pole

#### **Anchor Bolt Installation for Poles**

# x 4 A single anchor bolt template is provided per pole size to be used for the poles on the project. Anchor bolt template may be round or square dependant upon which pole is being used.

Use anchor bolt template to set anchor bolts into concrete as per civil engineering instructions.

Ensure that the concrete is plumb using a level. Failing to do this will result in pole being uneven or tilted.

Ligman does not provide foundation details A local engineer that is familiar with the site soil conditions should provide this information.

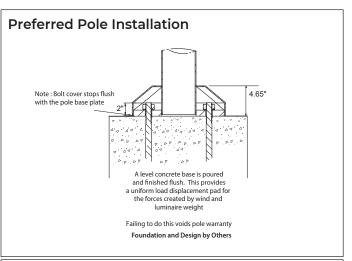

#### NOTE:

Ligman does not recommend using leveling bolts for pole installations.

Leveling shims can be provided, contact Ligman for more information.

Leveling Shim Example

In rare instances where leveling bolts have to be used, it is important that a flush concrete surface is created to mount the pole base plate.

NOTE: When using leveling bolts, bolt projection

should be 3.5"
Using Leveling Bolts
Option A

Note: Bolt cover stops flush
4.65"

Slot to be provided in concrete to allow water to drain

When using leveling bolts.

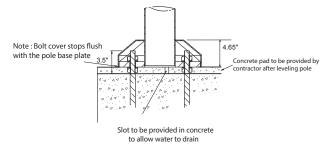

After establishing a level platform the space between the original concrete surface and the pole base should be filled with concrete and finished flush.

This provides a uniform load displacement pad for the forces created by wind and luminaire weight

Foundation and Design by Others

### Using Leveling Bolts Option B

with the pole base plate

When using leveling bolts.

After establishing a level platform the space between the original concrete surface and the pole base should be filled with concrete and finished flush.

This provides a uniform load displacement pad for the forces created by wind and luminaire weight
