Inspired by Nature Finishes The Inspired by nature Finishing is powder coating. Our metal dectransform the appearance of meta wood grain finish. This patented technology enables tand even marble or granite finish to	oration process can easily complete thermo oven. The oven tr paint layer befor and a vivid timbe	transfer is vacuum-sealed to the surface for a print and then transferred into a customized ansforms the ink into different forms within the e it becomes solid. Finally, the film is removed, r look on aluminum remains.		

powder coating.

The wood grain finish is so realistic that it's almost undistinguishable from real wood, even from a close visual inspection. The system of coating permeates the entire thickness of the coat and as a result, the coating cannot be removed by normal rubbing, chipping, or scratching.

The Coating Process
After pre-treatment the prepared parts are powder coated with a specially formulated polyurethane powder. This powder provides protection against wear, abrasion, impact and corrosion and acts as the relief base color for the finalized metal decoration.

The component is then wrapped with a sheet of non-porous film with the selected decoration pattern printed on it using special high temperature inks.

any sort. There are over 300 combinations of designs currently in use. Wood grains can be made with different colors, designs, etc.

Our powder coatings are certified for indoor and outdoor applications and are backed by a comprehensive warranty. These coatings rise to the highest conceivable standard of performance excellence and design innovation.

Added Benefits

- Added Benefits

 Resistance to salt-acid room, accelerated aging

 Boiling water, lime and condensed water resistant

 Anti-Graffiti, Anti-Slip, Anti-Microbial, Anti-Scratch

 Super durable (UV resistant)

 **TGIC free (non-toxic)

More Custom Finishes Available Upon Request

Consult factory for pricing and lead times

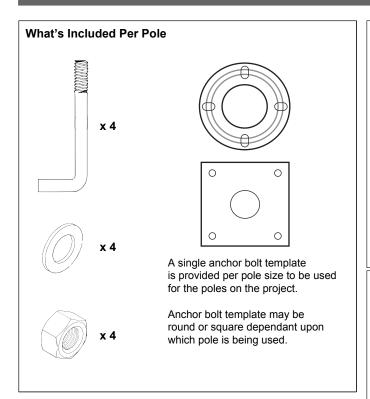

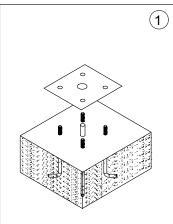

INSTALLATION AND SERVICE MANUAL

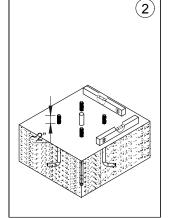

Anchor Bolt Installation for Poles

Use anchor bolt template to set anchor bolts into concrete as per civil engineering instructions.

Ensure that the concrete is plumb using a level. Failing to do this will result in pole being uneven or tilted.

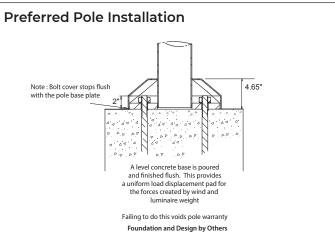

Ligman does not provide foundation details A local engineer that is familiar with the site soil conditions should provide this information.

NOTE:

Ligman does not recommend using leveling bolts for pole installations.

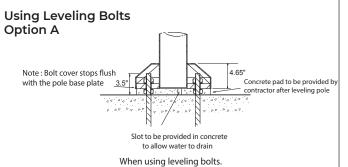

Leveling shims can be provided, contact Ligman for more information.

In rare instances where leveling bolts have to be used, it is important that a flush concrete surface is created to mount the pole base plate.

NOTE: When using leveling bolts, bolt projection should be 3.5"

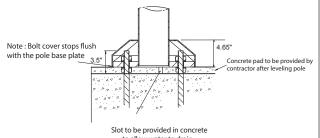

After establishing a level platform the space between the original concrete surface and the pole base should be filled with concrete and finished flush.

This provides a uniform load displacement pad for the forces created by wind and luminaire weight

Foundation and Design by Others

Using Leveling Bolts Option B

to allow water to drain

When using leveling bolts.

After establishing a level platform the space between the original concrete surface and the pole base should be filled with concrete and finished flush.
